PROFESSIONAL SUMMARY

Full-stack developer returning to software after nine years in automotive sales, finance, and floor management. B.S. in Web Design & Development (Full Sail University, 2016). Independently built and deployed three production-style applications, including a full-stack TypeScript app with a self-implemented JWT authentication layer over an Express and PostgreSQL backend. Brings a documented record of data integrity, compliance, and process improvement.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), SQL, HTML5, CSS3

Frontend: React, React Router, component architecture, state management, responsive design, Tailwind CSS v4, Vite

Backend: Node.js, Express, RESTful API design, JWT authentication, middleware architecture, bcrypt password hashing

Databases: PostgreSQL, relational schema design, foreign key constraints, query optimization

Testing & Tooling: Unit testing (Vitest, React Testing Library), Git/GitHub version control, npm, Lighthouse performance auditing

Security: HTTP-only cookies, SameSite CSRF mitigation, input validation, server-side sanitization, SQL injection mitigation

FEATURED PROJECTS

Car Loan & Amortization Calculator (Independent) — React / TypeScript / Express / PostgreSQL 2026

- Built a full-stack application calculating out-the-door vehicle totals and full amortization schedules, with user accounts that persist saved calculations; strict TypeScript across frontend and backend, verified clean under tsc.
- Implemented authentication from scratch rather than using a managed provider: bcrypt-hashed credentials, with the JWT issued at login and stored in an HTTP-only cookie with SameSite=Strict, closing off both XSS token theft and CSRF exposure.
- Wrote verification middleware that authenticates every protected route by default, making a forgotten per-route check impossible rather than relying on developer discipline.
- Modeled a relational schema linking saved calculations to users by foreign key so the database enforces ownership; refactored the backend into separate route, middleware, and data-access modules.
- Diagnosed a layered defect in which interest and tax rates were stored as percentages but consumed as decimal rates, surfacing only as a PostgreSQL numeric overflow above 10% APR.

Auto Detailing Business Website (Independent) — React / Vite / Tailwind CSS v4 2026

- Designed and built a responsive multi-page marketing site from information architecture through production deployment on Vercel.
- Raised the Google Lighthouse performance score from 76 to 98 via image optimization, code splitting, and render-path improvements.

Grass & More Co. — Landscaping Site (Independent) — React / Vite / Tailwind CSS v4 2026

- Modeled multi-value service data and lifted shared filter state to a common parent component to keep filtering consistent across pages.
- Wrote a component test suite with Vitest and React Testing Library to validate behavior before deployment.

PROFESSIONAL EXPERIENCE

Sales Consultant | Mark Jacobson Toyota — Durham, NC Apr 2026 – Present

- Designed a customer data-tracking process within the eLeads CRM to close gaps in how customer records were captured and maintained under the prior workflow.
- Redesigned the digital vehicle presentation process to make inventory presentation consistent across the sales floor.

Toyota of Greensboro — Greensboro, NC Sept 2022 – Mar 2026

Floor Manager

Sept 2023 – Jan 2025 · Oct 2025 – Mar 2026

- Identified scheduling as the team's core bottleneck and rebuilt the floor schedule to increase throughput without adding headcount.
- Authored the dealership's onboarding manual from scratch, reverse-engineering an undocumented hiring and training process into written procedure for new staff.

F&I Manager

Jan 2025 – Oct 2025

- Managed F&I operations for a high-volume store processing 80–90 deals per month with zero compliance defects under GLBA, FTC Safeguards, and Red Flags Rule requirements.

Sales Consultant

Sept 2022 – Sept 2023

- Managed a customer pipeline in the eLeads CRM, keeping records current and follow-up documented across the sales cycle.

Sales Consultant | Westgate Triad Mitsubishi, County Ford, Toyota of Greensboro, Cox Toyota — NC 2019 – 2022

- Established structured referral processes within the eLeads CRM across multiple dealerships, using scheduled follow-up cadences to build consistent repeat business.
